LARGE FORMAT DIGITAL VEHICLES & TRANSPORTATION

Message on the move

A complete range of self-adhesive solutions for vehicle wraps and graphics including personal, commercial and fleet vehicles. Suitable for large format digital printers including solvent, eco-solvent, latex and UV ink.

Airflow Technology streamlines the application

The textured liner imparts air channels into the adhesive to allow the installer to easily remove the air from behind the film so the vehicle graphics have a higher quality, bubble free application. The cast film and airflow liner are the perfect combination for the most difficult vehicles to wrap.

4

The right product for the right application

Ritrama offers cast, polymeric and monomeric vinyl in order to meet the demand of wrapping many types of different vehicle applications.

- **Monomeric films** are suitable for short-term applications on flat surfaces. (Up to 3 years outdoor)
- **Polymeric films** are suitable for intermediate applications on simple curves or flat surfaces. (Up to 5 years outdoor)
- **Cast films** are suitable for long-term applications with compound curves and rivets. These films are recommended for full vehicle wraps . (Up to 10 years outdoor)

Print Media & Overlamine combination

In order to protect the graphic from handling, installation, scratches and the environment an overlamine should be used. It will also enhance the image and is available in a variety of finishes.

*custom widths and lengths available upon request. Minimum order quantities may apply.

VEHICLES & TRANSPORTATION

SLIDE & TACK

The Need for Speed

Designed to reduce application time, the Slide & Tack range of self-adhesive films, are constructed with low initial tack to glide across the surface of the vehicle during installation reducing time by up to 30%. Slide & Tack can be applied to personal, commercial, fleet and safety vehicles.

5

Slide & Tack is offered in a polymeric version to be used on simple curves and flat surfaces with outdoor durability of up to 5 years. A premium cast version is also available for use on compound curves and rivets with an outdoor durability of up to 10 years.

LARGE FORMAT DIGITAL Windows, Walls & Floors

Show your Message, inside and out

Self-Adhesive solutions for every situation including retail, promotional, point of purchase, wall murals, directional signage and business branding. Take advantage of the available space with custom dynamic digital graphics.

Windows

Send a clear message

Clarity is the key for crystal clear window graphics, a combination of high quality films and transparent adhesives, makes the graphics stand out because the unprinted area is as clear as the glass below. No trimming around the image is required. Clean removal is important to minimize effort and time when the graphic is to be changed. Ritrama's WINDOW CAL products are optimized for double sided window graphics.

Easy application or non- PVC options may also be key factors in choosing which product to use.

The message becomes environmentally friendly

Non- PVC solutions may be required, polypropylene and polyester films can be used as white and clear alternatives and still provide quality window graphics. Ritrama has non-PVC options for UV curable inks.

Walls

Murals with messages

Ritrama films and adhesive are conformable and stick to a variety of surfaces. Even with challenging applications, great results can be expected both indoor and outdoor. Banks, hotels, offices and shops require high quality graphics to promote their brand and impress customers. ULTIMATE WALL ACTION is a great solution for indoor wall murals.

Floors

Ground level messaging

Short-term graphics for indoor floor graphics for shops, supermarkets, airports and convention centers. The print media has a specific adhesive that adheres to most smooth indoor surfaces to prevent tripping, while ensuring easy and clean removal.

Floor graphics need to be laminated with a film that has an anti-slip rating to prevent danger while walking over the graphic. PERFORMANCE FLOOR TALKER and ECONOMY FLOOR TALKER are UL listed under floor coating and finishing materials tested to the UL 410 standard "Slip Resistance of Floor Surface Materials".

Print Media & Overlamine combination

In order to protect the graphic from handling, installation, scratches and the environment an overlamine should be used. It will also enhance the image and is available in a variety of finishes.

*custom widths and lengths available upon request. Minimum order quantities may apply.

The technical bulletins are available in the resources menu on our website www.ritrama.com with videos and with media profiles.

EASY APPLICATION SOLUTION

Easy as Child's Play

RI-DOT is an easy application solution designed to ensure a bubble free installation for short term promotional campaigns, point of purchase displays, window and wall graphics by anyone, not just professional installers. No hassle installation and clean removability makes everyone an expert.

RI-DOT is engineered to be quick and easy to install and remove. Messy wet application is not required. The unique dot patterned adhesive allows air bubbles to be removed from behind the image allowing a perfect installation without tools. Changing out graphics cleanly and effectively has never been this simple. RI-DOT is available in gloss and matte versions of both white and clear.

LARGE FORMAT DIGITAL SIGNAGE

Visualize the message

Self-adhesive solutions for signs, billboards, buildings, back-lit displays and barricades. There are products for many different surfaces both outdoor and indoor applications. A wide variety of special adhesives provides many options to find the product that will fit the desired use.

16

Indoor & outdoor signage

Entice, Captivate, Inform

Create eye catching signs, displays, billboards and wall graphics. Products are available for decorative panels, windows, walls, barricades and point of purchase displays for shopping malls, banks, restaurants, hotels and other businesses. Outdoor signage can reach a large number of viewers if displayed properly. These products resist environmental conditions and look better longer in order to convey the proper message more effectively. Overlaminates can be used to prolong the life of the image.

Tradeshows & Events

Stand out with cutting edge solutions

Design a booth with products that will take it to the next level and catch the attention of anyone that passes by. Self-adhesive materials can be used for floor graphics, standing displays, podiums and counters. Easy application allows graphics to be changed last minute or on the show floor allowing a more fluid approach, with anyone being able to make the installation appear like it was professionally done.

Back-lit Displays

Light up the night

Using high quality vinyl with clear adhesive to light the back of digitally printed images, helps the graphic stand out. The versatility of self-adhesive vinyl make it a great option for back-lit applications.

Print Media & Overlamine combination

In order to protect the graphic from handling, installation, scratches and the environment an overlamine should be used. It will also enhance the image and is available in a variety of finishes.

LARGE FORMAT DIGITAL FINISHING

Finish it

The job is not always done when the printing is over. An Overlamine should be used or the image may need to be mounted to a substrate. The correct adhesive should be used to allow the graphic to perform as expected.

Overlaminating and mounting are key components in giving the graphic the properties needed to fulfill its intended lifespan. In the same manner paint protection film is how to finish areas of a vehicle that could be hit by flying objects.

26

Overlamine

Investments need to be protected

Inks are improving but in order to keep them from fading, chipping or being scratched a laminating film should be used to protect the image from both exposure and handling. Overlaminates also give the image a consistent finish of gloss, luster or matte, and can turn any print into a dry erase board or trade show graphic. See page 10 for vehicle graphic overlaminates and page 24 and 25 for overlaminates recommended for signage finishing and much more.

Paint Protection

For a long-lasting finish

Paint protective films are used on high-end, luxury vehicles as well as sports cars to prevent rocks or other small objects from causing chips in the paint while driving. These films also prevent the vehicles' color from fading and general wear and tear.

Mounting Adhesive

Add the adhesive

Mounting adhesives can be used to make any image into a decal. The printed image can be adhered to substrates such as composite boards, rigid PVC, foam board, fluted plastic, as well as windows, acrylic, or other transparent substrates or surfaces

*custom widths and lengths available upon request. Minimum order quantities may apply.

GENERAL INFORMATION

PRODUCT RANGE

The product range represents the most typical applications. Many other constructions, according to specific customer requests, can be developed by our Technical Department. To offer complete and better solutions, we adopt a selection criteria which consist of categorizing our products by applications: this helps to easily find the right digital media.

YOUR PROJECT, OUR SKILLS

Each production center has its own technical specialist for even the most challenging custom application requirements. The R&D department is committed to guaranteeing the highest quality standards based on the extensive expertise of its centrally coordinated technical teams who are in constant dialogue with selected suppliers. Coating lines make use of cutting edge automated, synchronized, handling systems in order to ensure continuity of supply at high production speeds. The continuous optimization of production processes, combined with our quality control systems for accurate traceability, make for high production capacities.

RESOURCES

Documentation can be found on our website featuring videos and technical bulletins that shows step by step, techniques to apply self-adhesive materials depending the substrate. The documentation shows, clearly and accurately, the different steps and the application methods for various Ritrama materials. There is also a section dedicated to the download of media profiles, which includes a list of certifications divided according to the major manufacturers of digital printing devices.

SPLICES

Roll splices are part of the coating process. Ritrama operates with the aim of reducing them as much as possible. We produce rolls of 150 linear feet splice free.

PACKAGING

For most orders, rolls are supplied on pallets packed horizontally with the possibility of double stacking. For certain other orders, including container shipments, rolls are packed vertically. Each pallet is completed with shrink wrap film, carton edge protection and banding.

Sheets are packed in carton boxes or paper wrapped reams or can also be bulk-packed and shrink-wrapped. When bulk-packed (by customer request), sheets are usually tabbed in multiples of 100.

RECOMMENDED STORAGE CONDITIONS

When taking the delivery of the material, please check the packaging and immediately inform the supplier in case of shortage or damage.

The following storage conditions, defined by FINAT section 2.5, are applicable only to the material delivered by Ritrama which has not undergone further processing:

- Ideal storage conditions are at a temperature of 70°F and 40-50% HR.
- Store in a cool and dry place.
- Do not store close to a heat source or in direct sunlight.
- Keep the material in the original packaging until required for use.

Pay particular attention to the recommended shelf-life and ensure correct stock rotation.
